SECTION 09 21 16 -- GYPSUM BOARD ASSEMBLIES

PART 1 - GENERAL

A. Gypsum drywall corridors, public spaces and other areas of high abuse shall use impact resistant wallboard.

B. Design drawings shall indicate special details associated with fireproofing, acoustic seals, and fire ratings. Penetrations and items recessed into the assembly shall be detailed and specified to ensure that fire and acoustical performance of the assembly is not compromised.

C. Use moisture-resistant boards for painted walls in toilet rooms as well as wet walls (walls that backup or have attached plumbing fixtures). Moisture-resistant board is not allowed as a substrate for ceramic tile. Glass mesh mortar units shall be used.

D. Continuous wood blocking is required in drywall to anchor in frames and accessories and items listed in Section 06 10 00 - Rough Carpentry.

E. Electrical and telephone outlets are not allowed to be back-to-back in the same framed space.

F. Corner guards requirements must be approved by Brown Project Manager
